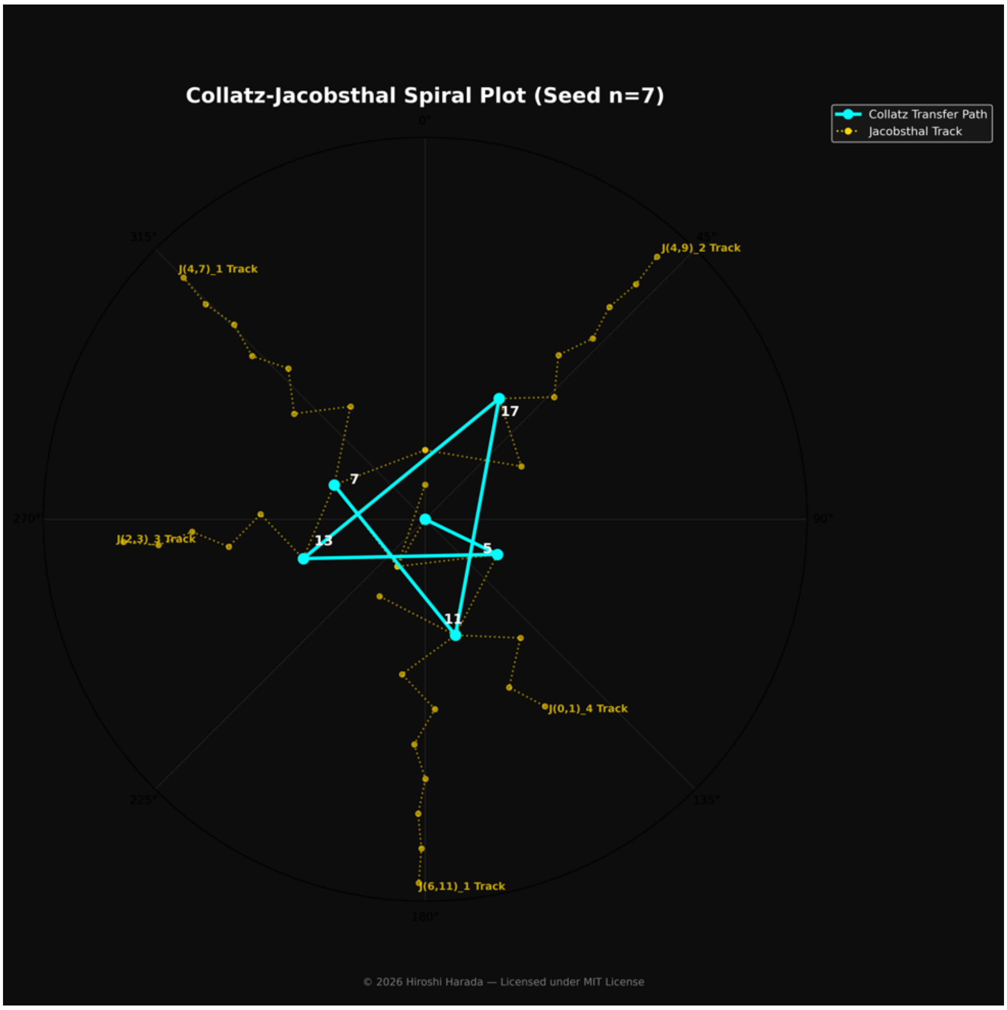
Reconstruction of the Collatz Mapping *via* Jacobsthal-Normalized Spinor Representation

Hiroshi Harada — June 14, 2026



Odd	Jm(a,b)	a+b	m = 0	1	2	3	4	5	6	7	8
7	**$J_1(4,7)$**	**11**	4	**7**	15	29	59	117	235	469	939
11	**$J_1(6,11)$**	**17**	6	**11**	23	45	91	181	363	725	1451
17	**$J_2(4,9)$**	**13**	4	9	**17**	35	69	139	277	555	1109
13	**$J_3(2,3)$**	**5**	2	3	7	**13**	27	53	107	213	427
5	**$J_4(0,1)$**	**1**	0	1	1	3	**5**	11	21	43	85

Figure 1. J-spinor representation of the odd Collatz orbit for the initial value 7 (7 → 11 → 17 → 13 → 5 → 1).
The trajectory is visualized along the Jacobsthal track within the 2-adic logarithmic spiral space.
